Driving Energy

Ball Valves

RINGO VALVULAS

COMPANY OVERVIEW

Ringo Válvulas (RV) is located in the industrial city of Zaragoza, Spain. Since its establishment RV has designed and manufactured its own cast and forged valves. Our experience over 40 years on the valve industry is the key to our international success and recognition. We export more than 75% of our production all over the world.

RV activities include the design, material procurement, manufacturing, assembly and thesting of valves. We supply Gate, Globe, Check, Ball Plug, Butterfly, Control and Special Valves produced according to different standards (ASME-ANSI, DIN, API, BS), sizes, pressure ratings and materials (Carbon Steel, Alloy Steel, Stainless Steel, Duplex, Monel, etc.).

Our valves are used in many different applications such as Oil & Gas, chemical and Petrochemical, Cryogenic and Power Generation (including Nuclear, Combined Cycle, Thermoelectric and Hydraulic Plants).

RV facilities are modern and fitted with advanced equipment for manufacturing, assembly, testing and inspection. This equipment guarantees the conformity with the most stringent specifications.

CONTENTS

RINGO VALVULAS

QUALITY

Ringo Válvulas is totally commited to Quality, and a smooth integration of all departments with the Quality Assurance and Quality Procedures.

Ringo Válvulas is qualified to ISO 9001-2000 by Lloyd's Register as well as PED, ATEX, TUV AD-2000 HPO & WO, EN-ISO 3834-2, Functional Safety Management system (SIL), among others.

This guarantees that all our products are designed, manufactured and delivered in accordance with the most strict customer requirements. By this we achieve our main goal "to offer a high quality product and service to ensure a high degree of satisfaction and fidelity of our customers".

MARKETS

Our valves are used in many different applications such as Nuclear Power Plants, Conventional Power Plants, Oil & Gas, upstream and downstream offshore, chemical, petrochemical, cryogenic, etc.

We export more than 75% of our production to countries all over the world.

Worldwide customer service, we provide spare parts and field engineers to support our customers anywhere.

Ringo Válvulas has been involved in many large international projects carried out by the world's leading engineering construction companies.

01 Standards and Specifications

Our ball valve program covers floating type ball valves, and trunnion mounted. Side entry and Top Entry constructions are available. Ball valves are intended for a wide range of applications such as oil & gas (both upstream & downstream) chemical, petrochemical, energy and process industries.

Ball Valve Standards

Ball valves are mainly designed to conform API 6D (Specification for pipeline valves) and ANSI B16.34 (Valves Flanged, Threaded and Welding End) or API 6A (Specification for Wellhead and Christmas Tree Equipment) in case of upstream applications. Other related standards such as ANSI B16.5 (Pipe Flanges and Flanged Fittings), ANSI B16.25 (Buttwelding Ends), ANSI B16.10 (Face to Face and End-to-End Dimensions of Valves) are also used for the design of ball valves.

Also our ball valves are designed to meet FIRE SAFE requirements to BS6755, API 6FA and API 607.

Final testing is done to conform API 598 (Valve Inspection and Testing) MSS-SP-61 (Pressure Testing of Steel Valves) API 6D (Specification for Pipeline Valves) or API 6A (Specification for Wellhead and Christmas Tree Equipment) requirements.

Materials are selected mainly to ASTM standards and when sour service is specified to meet NACE MR-01-75 (Sulfide Stress Cracking resistant Metallic Materials for Oilfield Equipment).

Size & Pressure

BALL VALVE SERIES							
SIZE	API 6D						
	150	300	600	800	900	1500	2500
Floating (Top entry & Side entry)	From 1/2 to 6"	From 1/2 to 6"	From 1/2 to 6"	From 1/2 to 2"			
Trunnion (Top entry & Side entry)	From 2" to 56"	From 2" to 56"	From 2" to 56"		From 2" to 42"	From 2" to 36"	From 2" to 24"

SIZE	API 6A						
	2000	3000	5000	10.000	15.000		
Trunnion	From 2-1/6" to 7- 1/16"	From 2-1/6" to 7- 1/16"	From 1-13/16" to 7- 1/16"	From 1-13/16" to 7- 1/16"	From 1-13/16" to 5- 1/8"		

Actuators

RV valves can be supplied with any kind of automatic operator, such as electric actuators, pneumatic actuators, hydraulic actuators, gas-over-oil actuators, etc.

Wide Selection of Seats / Seals

Depending on the application, RV ball valves are provided with a wide variety of trim materials.

Metal & Soft Seated valves are available as well as large range of different seal materials covering different services.

Carbon steel, stainless steel, duplex and special alloys trims, etc, are available.

02 Features and Benefits

Trunnion Valves

Bi-directional Flow

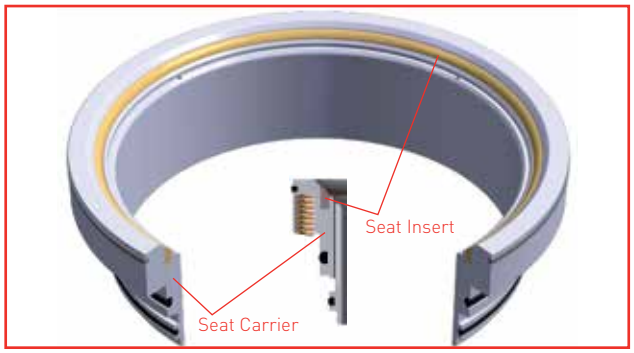
Standard RV ball valves are suitable for bi-directional sealing.

Soft Seated Valves

The seat design features a deep pocket with a protective lip which makes the design a long lasting design.The seat assembly consists in an outer metallic seat carrier with a soft seat insert. The soft insert is located into a groove in the metallic seat carrier.

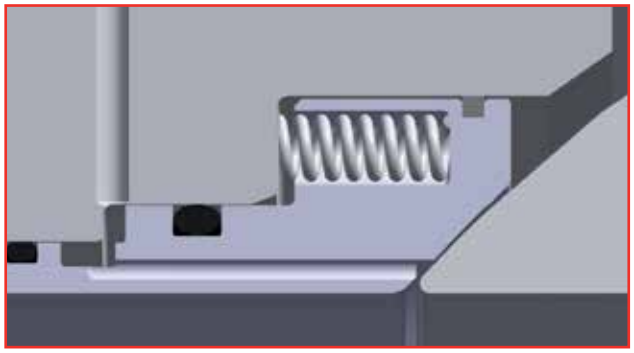
The complete seat assembly is floating inside valve body and it is energized by a set of springs which load the seat assembly against the ball preventing leakage from behind the seat.

Seat assembly is provided with outer o-ring to avoid leakage through the seat carrier and a graphite back up ring which ensure the tighness in case the o-ring is damaged.



Metal Seated Valves

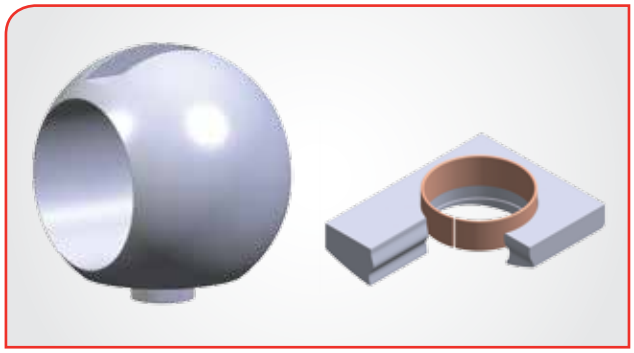
Similar seat construction is done in case of metal seated valve. However the seat in this case consists only in a metallic seat ring (without any insert). The surface in contact with the ball is hardfaced with Tungsten Carbide, stellite etc., achieving a minimum hardness of 42 HRC to stellite or convectional hardfaced and 78 HRC to Tungsten Carbide or special hardfaced. This makes the design long durable and reliable and able to achieve classes V & VI leakage class.



Trunnion Ball Valves

Trunnion Design for Low Torque Operation

The large diameter trunnions provide smooth, easy operation and extended bearing life. The trunnion bearings are stainless steel with heavy-duty PTFE coated.

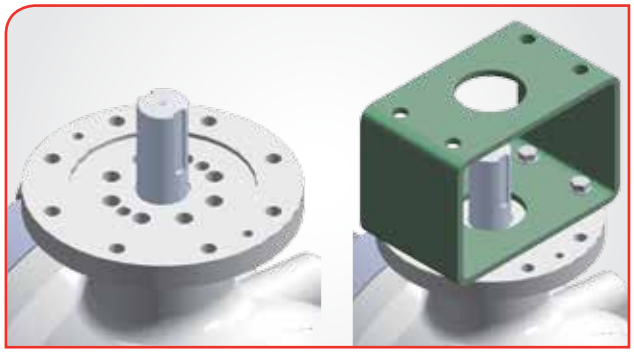


One-Way Operating Lever arm

Operating wrenches are keyed so they may be installed only in one position in line with the bore of the valve, when the valve is in the open position. They serve as an open-closed indicator in addition to the stop plate indicator on the bonnet cap. Wrenches are available as an option on full bore through regular port models. Worm gear actuators are required on all larger sizes for manual operation.

Actuator Mounting Provisions

Actuator mounting brackets, shown below, are available as option for users who prefer to install their own actuators. We recommend that buyers specify factory-installed actuators to assure reliable, long life performance and to gain the benefits of RV "single source responsibility, single source warranty" policy.



Bare Shaft Valves

RV Valves can also be provided bare shaft ready to receive any kind of actuator.

Grease Fittings

Three grease fittings are supplied, providing the ability to inject lubricant into both seat pockets and stem area.

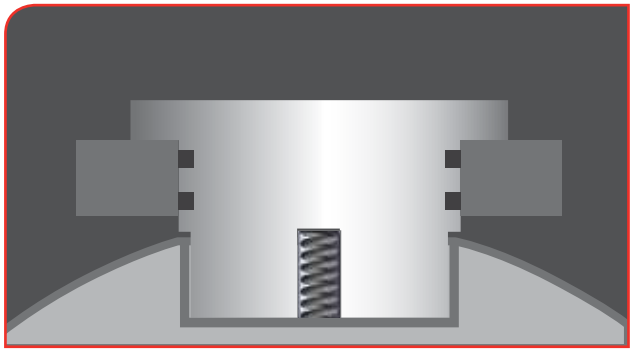
Manual Operated Valves

For manual valves up to 4", operating lever can be provided. Lever operated valves are also provided with a stop plate valve to avoid travel of more than.
The lever together with the stop plate provides valve position indication.

For valves larger than 4", worm gear actuator is provided.

Antistatic Device

Internal parts that are insulated from the body may build up a static electric charge.
When service conditions require electrical continuity to prevent static discharge, this is ensured by the adoption of coil springs to ensure electrical continuity between body, ball and stem.



Stem Extension for Buried Service

A stem extension is a need when valves are being installed in underground pipeline making the valve operator non accessible.

RV valves offer a wide variety of stem extensions for manual operated valves as well as for actuated valves, including gas-over-oil operated valves.

The stem extension includes the complete system of grease injection, actuator gas supply, etc as a part of it.

Floating Seats

The seat assembly, either soft seat or metal seat, which seals against the ball is provided with coil springs on its back side. The coil springs press the seat assembly against the ball making sure the contact between the seat area and the ball even in absence of line pressure.

When line pressure increases, the seat differential area (C=A-B) creates a piston effect forcing the seat against the ball. This additional load increases the effectiveness of the seat/ball interface.

The higher the line pressure is the greater the piston effect.

Automatic Cavity Pressure Relief

The pressure-actuated seat construction, used in trunnion ball valves ensures positive relief of excess of valve central cavity pressure. If valve central cavity pressure exceeds a pre-set pressure in the seat, the seat assembly will automatically back-off to relieve the excess of pressure.

Double Piston Effect (optional)

With normal floating seats a ball valve is-bi-directional, creating a single seal on the seat exposed to line pressure. The opposing seat vents pressure downstream. If the upstream seat fails, it may be appropriate to use the downstream seat as a back up seal to the primary seat. Modified seats can offer this feature. The outer diameter of the seat is designed with a double piston profile, exposing more surface area to cavity pressure that a normal floating seat. In the case of an upstream leak, this enhances the contact pressure between downstream seat and ball.

The differential area A= B-C creates a piston effect forcing the seat against the ball.

In such cases, it is recommended that an automatic pressure relief valve be installed to protect the body cavity from excess pressure.

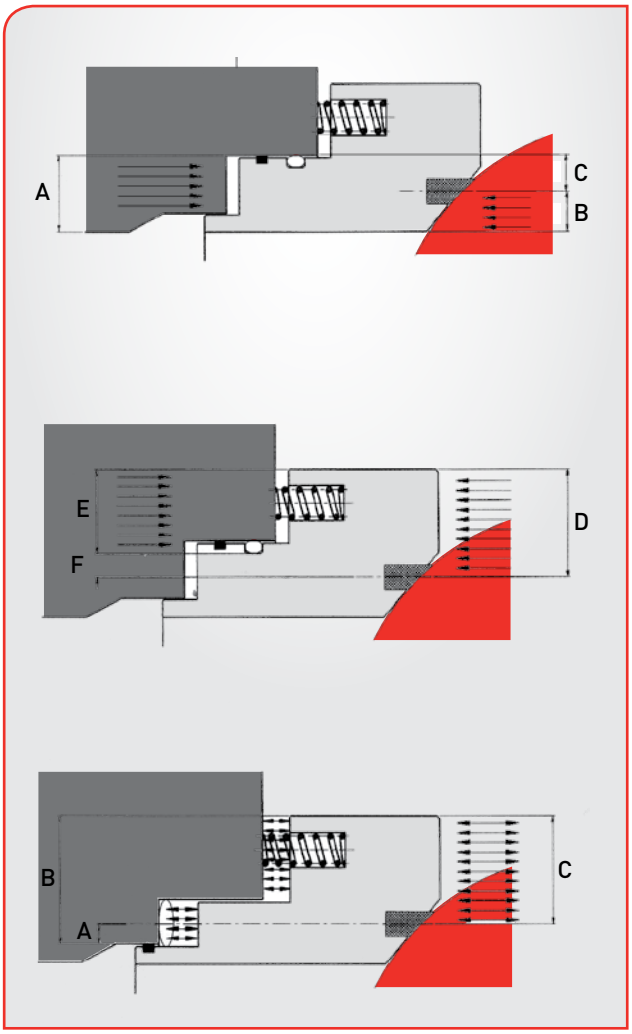
As an option, it is possible to adopt the double piston effect on one side only. Although this eliminates the need for a pressure relief valve, it does make the valve uni-directional.

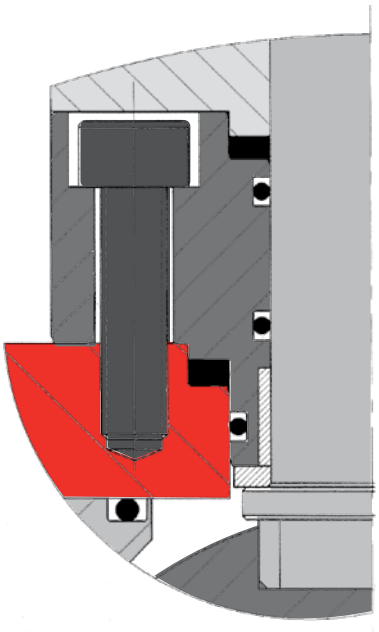
Double Block-Bleed (optional)

Because the floating seats seal, both upstream and downstream, simultaneously, double block and bleed procedures can be performed. With the valve under pressure, the body cavity may be vented or drained to the atmosphere through the bleed valve.

Anti Blow-Out Stem

RV valves are always provided with anti-blow out stem design, which ensures total safety and integrity.





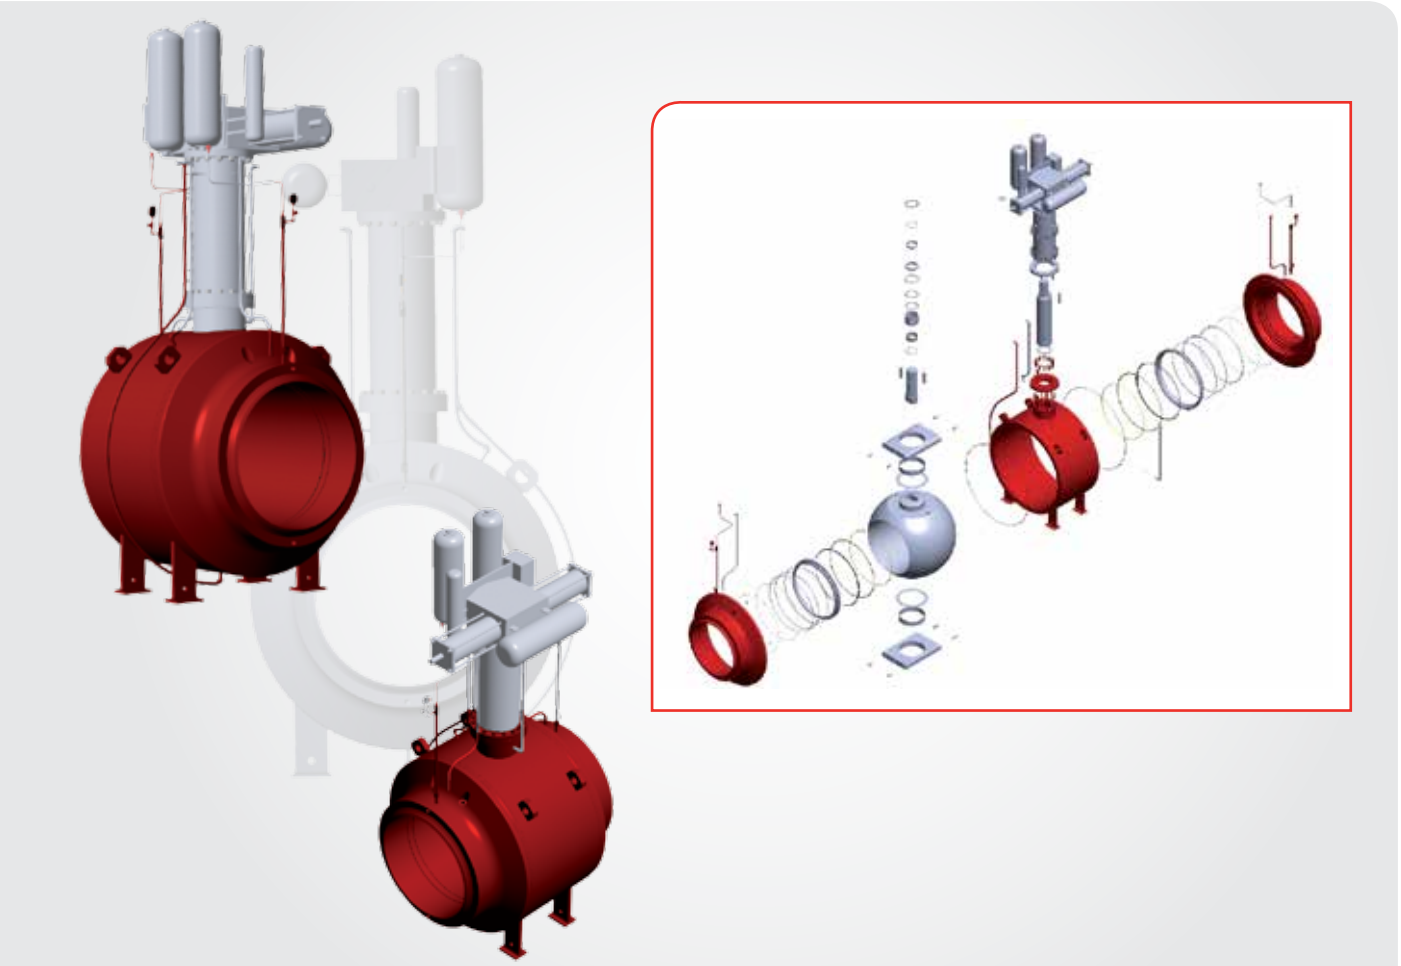
Fire Safe Design

RV valves are of FIRE SAFE design, which substantially prevent the leakage when valve is subject to high temperatures.

In case of fire accident inside the valve, seals, and seat inserts (for soft seated valves) are melted and then a metal to metal seat is made between the metallic seat and the ball ensuring a degree internal sealing tightness.

All o-ring are also disappeared and only graphite back-up rings remain in seats and valve stem, making the valve tight for leakages to the atmosphere.

RV valve designs conform requirements of API 6FA, API607 and BS6755.



03 Materials

Valve Material

RV valves are manufactured using a wide selection of materials such as:

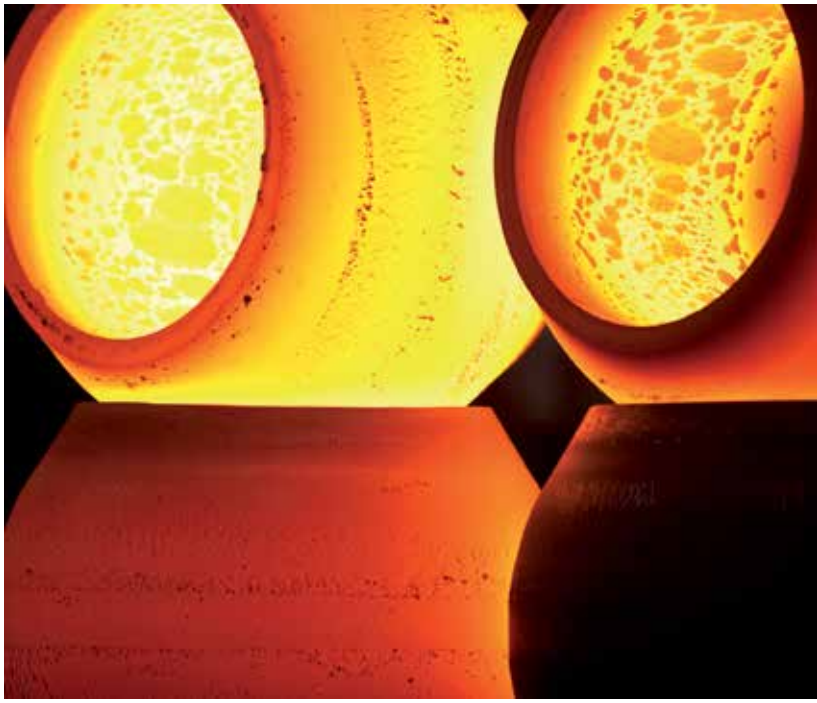
- Carbon steel.
- Killed carbon steel for low temperature applications.
- High resistance alloy steels for API 6A applications.
- Stainless Steel.
- Duplex & Superduplex steel.
- Nickel alloys.

Materials also meet the requirements of NACE MR-0175/ISO 15156 when sour gas services are specified.
Our technical staff is ready and available to provide customized material selection for those special customer applications RV always provides the customer with suitable information of material selection which is agreed prior valves are manufactured.
For majority of industry applications the following table gives the main guidelines of material selection.

Trim	Service	Temperature	Class	Body	Internal	Seat	Seal
A	General Purpose	-29° to 150°	150-300-600 900-1500-2500	A105	A105+ENP	PTFE Devlon	Viton
B	General Purpose	-29° to 250°	150-300-600 900-1500-2500	A105	A105+ENP	Peek	Viton
C	Moderate Corrosive	-29° to 150°	150-300-600 900-1500-2500	A105	316SS or 321SS	RPTFE Devlon	Viton
D	Low Temperature	-46° to 150°	150-300-600 900-1500-2500	LF2	LF2+ENP	RPTFE Devlon	Viton
E	High Corrosive	-29° to 150°	150-300-600 900-1500-2500	F316/F321/F51	F316/F321/F51	RPTFE Devlon	Viton
F	Sour service	-29° to 150°	150-300-600 900-1500-2500	A105	A105+ENP	RPTFE Devlon	Viton
G	Offshore	-29° to 150°	150-300-600 900-1500-2500	F51	F51	RPTFE Devlon	Viton
H	Seawater	-29° to 150°	150-300-600 900-1500-2500	F44	F44	RPTFE Devlon	PTFE
I	Cryogenic	-196° to 150°	150-300-600 900-1500-2500	F316/F321	F316/F321	KEL-F	PTFE

Remarks

- The above table is orientative and intended only for information.
- In case of Metal to Metal valves seat and ball are both hardfaced with different materials such as stellite, Tungsten Carbide, Chromium Carbide, etc, being the base materials selected upon the valve application and the design pressure/ temperatures.



Sealing Material

Commonly O-rings or Lip Seals as used as sealing element of ball valves. The most commonly used materials are O-RINGS:
BUNA-N (Nitrilic rubber).
VITON including its alternatives of high temperature VITON (up to 210/ºC) and VITON for explosive decompression.
Others depending on application.

Lip Seals

Lip seals are used normally for more severe applications such as cryogenic services, high temperature or also in nuclear valve application (when the seal must be radiation-resistant).

The lip seal is made of different materials such as PTFE, KEL-F, etc, and it is self energized by an internal spring of stainless or inconel alloy.

Lip seals must be mounted in the positive direction of pressure in such a way that fluid improves the sealing load of spring.

SEAT MATERIALS • Soft Seated Valves

- PTFE or Teflon suitable up to ANSI Class 600.
- PTFE reinforced by graphite.
- Nylon suitable for high pressure, and for temperature range up to 120ºC.
- Devlon suitable for high pressure, and for a wider range from low to high temperature.
- PCTFE or KEL-F suitable for low temperature, up to -196ºC.
- PEEK suitable for high temperature up to 260ºC.

Metal Seated Valves

• Stellite	Hardness up to 45 HRC
• Tungsten Carbide	Hardness up to 85 HRC
• Chromium Carbide	Hardness up to 70 HRC

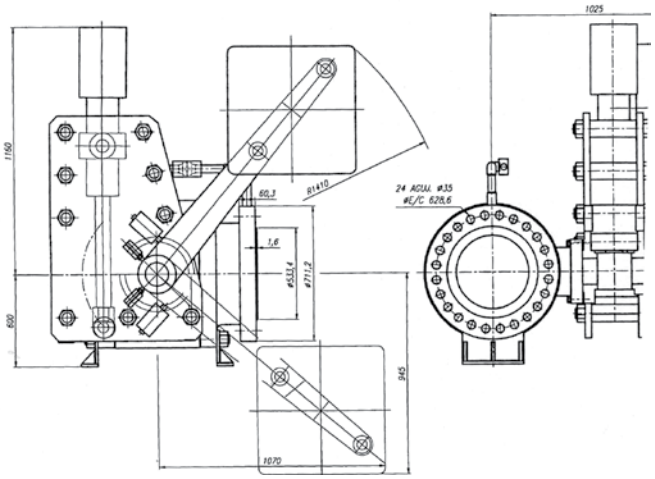
04 Other RINGO Ball Valves

Gas-Over-Oil Actuated Valves

This valve is used in gas pipelines and the actuator is powered directly from the line gas pressure.
Valves actuator may be provided with line break detection system which closes the valve in case that the gradient of pressure drop in the line is greater than a preset value.

Emergency Assisted Ball Valves

This valve is intended for protection of turbine/pump in hydroelectric power stations. Valve is assembled in horizontal position and provided with a hydraulic piston to open the valve. In case of reverse flow which may damage the turbine/pump, this is detected by a pressure transducer which sends a signal to the valve releasing the pressure in the hydraulic piston and allowing the valve counterweight to close the valve in few seconds avoiding line counterflow to reach the turbine/pump.



Fully Welded Ball Valves

Fully Welded ball valves are available for those cases when leakage throughout atmosphere must be absolutely avoided such as in gas transmission pipelines.

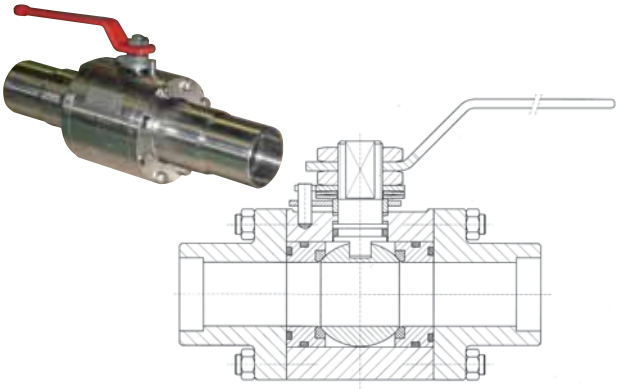
Valve is built in three pieces fully welded constructions.

Top-entry Ball valves

The Top-entry valve types have a major application when a frequent maintenance must be carried out and the valve can not be easily removed from the pipe.

In this valve model, all the internals can be easily dismounted by loosening the bonnet of the valve and removing the ball, the seat-holders and the shaft.

When mounting the valve again, the seat-holders have a system to regulate the compression of these to the ball.



In-Line Serviceable Ball valves

For sizes up to 6", this type of valve can be used giving the same possibility of maintenance as top entry ball valve but being a construction much more economical.

API6A Ball valves

For upstream applications, three pieces side entry ball valve is used in accordance with the requirements of API 6A. Valve classes from class 2000 to class 20000 In sizes from 2-1/16" to 7-1/16" are available.

Material selection is done in full compliance with API 6A requirements.

Valve designs are available to meet Pressure Product Requirement levels PSL-1, PSL-2, PSL-3 / PSL-3G and PSL-4.

09 Manufacturing Range

Gate

Standards	Sizes	Features Design - Materials	
ANSI B16.34 API 600 API 6D BS - 1414	- 72" ANSI 150 - 64" ANSI 300 - 48" ANSI 600/900 - 36" ANSI 1500/2500 - 24" ANSI 4500	Bolted bonnet Pressure seal Cast and forged Solid Wedge Flexible Split Wedge Parallel Slide Through conduit Special Designs Double Block and Bleed	
API 6A	2-1/16" to 7-1/16"class 2000 2-1/16" to 7-1/16"class 3000 2-1/16" to 9" class 5000 1-13/16" to 7-1/16"class 10000 1-13/16" to 5-1/8"class 15000		

Globe

Standards	Sizes	Features Design - Materials	
ANSI B16-34 BS-1873	- 48" ANSI 150/300 - 36" ANSI 600/900 - 24" ANSI 1500/2500 - 12" ANSI 4500	Bolted Bonnet Pressure seal Cast and forged Zero steam leakage Non return "Y" pattern globe Bellows seal globe Stop check globe Angle globe valve	

Control

Standards	Sizes	Features Design - Materials	
ANSI B16.34	- 16" ANSI 150/2500 - 4" ANSI 4500	Cage guided globe Top guided globe Angle type 3 - Way type Butterfly type	

Check

Standards	Sizes	Features Design - Materials	
API 6D BS-1868 ANSI B16-34	- 64" ANSI 150 / 300 - 48" ANSI 600/900 - 36" ANSI 1500/2500 - 24" ANSI 4500	Bolted bonnet Pressure seal Cast and forged Piston check Tilting disc Swing check Emergency assisted Duo Check	
API 6A	2-1/16" to 11" class 2000 2-1/16" to 11" class - 3000 2-1/16" to 11" class - 5000 1-13/16" to 7-1/16" class 10000 1-13/16" to 4-1/16" class 15000		

Ball

Standards	Sizes	Features Design - Materials	
API 6D	- 56" ANSI 150 to 900 - 36" ANSI 1500 / 2500	Floating type Trunnion mounted Top Entry and Side Entry design 3-Way Metal to Metal or Soft Seated Bolted of fully welded design 2 PCS and 3 PCS design	
API 6A	2-1/16" to 7-1/16"class 2000 2-1/16" to 7-1/16"class 3000 2-1/16" to 9" class 5000 1-13/16" to 7-1/16"class 10000 1-13/16" to 5-1/8"class 15000		

Butterfly

Standards	Sizes	Features Design - Materials	
AWWA C-504	40" - 120" CLASS 25 A up to 250 A	Rubber lined Check Butterfly Single piece disc	
BS - 3952	3" - 40" ANSI 250		

Choke

Standards	Sizes	Features Design - Materials	
API 6A	2-1/16" - 7-1/16" - 2000 2-1/16" - 7-1/16" - 3000 1-13/16" - 7-1/16" - 5000 1-13/16" - 7-1/16" - 10000	Positive Adjustable
